OceanX – A watch that brings out the Ocean Explorer in you.

Our mission is simple: To recreate the spirit of legendary dive watches.

Using the latest watch making technologies to re-engineer the classic design making more durable modern day dive watches powered by high quality automatic mechanical movement with a more affordable price tag.

All OceanX watches carry a 24 months limited international warranty.

The case of the OceanX SHARKMASTER 1000 / S / M / M9 has a diameter of 44mm and formed from a single block of solid stainless steel, rose gold PVD-coated steel or DLC-coated steel. Lug width 21mm, height 17mm, screw-down crown 8mm. Each watch is equipped with a helium escape valve.

The 60-minute graduated, unidirectional rotatable bezel is made with a ceramic insert, black layered forged carbon insert or crystal. Water-resistance is guaranteed to the depth of 1000 metres. The sapphire crystal on the SHARKMASTER 1000 / S / M / M9 is 4.5mm thick and is treated with anti-reflection coating.

Each watch is powered by:

Seiko NH35 / NH70 automatic movement with 24 jewels and power reserve of 41 hours.

Miyota 90S5 / 9015 automatic movement with 24 jewels and power reserve of 42 hours.

The dial has Luminova hour markers and is specially designed for maximum visibility under water. The bracelet is made of stainless steel, rose gold PVD-coated steel or DLC-coated steel. The strap is made of leather or rubber and is fitted with a large interchangeable stainless steel, rose gold PVD-coated steel or DLC-coated steel buckle.

Your OceanX SHARKMASTER 1000/S/M/M9 is fitted with an automatic movement.

Position 0

Crown fully screwed down. When the crown is in this position, the watch is waterproof to a depth of 1000m and is ready to wear.

Position 1

Crown is unscrewed so that it is just free of the screw thread. This position, rarely used, permits hand winding.

Position 2

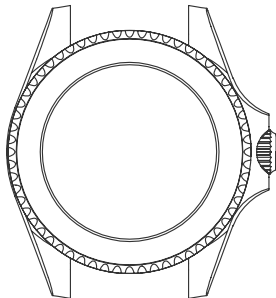

Crown pulled out to the first notch. Turning the crown forward advances the date rapidly which is particularly useful at the end of a month of less than 31 days.

Position 3

Crown pulled out to the last notch. Position for resetting the hands either backward or forward. The second hand is stopped automatically and will not re-start until the crown is pushed back.

Make sure the crown is fully down to ensure water tightness.

Also, please don't wear the watch when you go to a sauna, hot tub, jacuzzi or stream room.

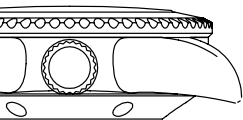

For all questions concerning the operation and maintenance of your watch, the network of Official OceanX Retailers across the five continents are at your service.

Handpicked for their uncompromising professionalism and expertise, they will be pleased to advise you at any time.

Your watch is fully guaranteed for two years. At the time of purchase, make sure that your Official OceanX Retailer has filled out the guarantee form.

Only this signed and dated document can give you access to the official worldwide OceanX service network.

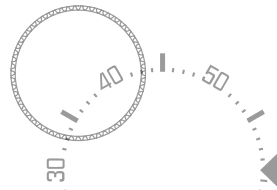

To preserve the beauty and lustre of your watch and to prevent attack by corrosive agents, we recommend that you clean it from time to time with soap and lukewarm water using a soft brush. After exposure to sea-water, rinse in lukewarm water to eliminate any salt or sand deposits. Before any cleaning operation, make sure that the crown is screwed down completely.

Attention

1. Do not operate the winding crown under water.
2. Do not use the watch at a depth greater than that indicated.

For optimum performance and accuracy of the mechanical movement, your watch requires several different types of lubricant. Variations in the viscosity of these lubricants can have an influence on its normal operation. For this reason we recommend that your watch is cleaned approximately every five years, depending upon its usage. This service, which will also give your watch a renewed brilliance, may be carried out through any of our Official Retailers or Service Centres in major countries throughout the world.
